PROFESSIONAL SUMMARY

Entry-level Software Engineer with a B. Tech in Computer Science (2025), specializing in backend development, REST APIs, and scalable web applications. Proficient in Python, Django, Flask, and MySQL, with strong problem-solving skills and a solid foundation in Data Structures & Algorithms. Experienced in building data-driven systems, optimizing performance, and developing efficient, reliable software solutions.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, SQL, HTML, CSS

Frameworks & Libraries: Django, Flask, React.js, NumPy, Pandas

Databases: MySQL

Developer Tools: Git, GitHub, GitHub Actions, VS Code, PyCharm, Jupyter Notebook

Core Concepts: Data Structures & Algorithms, RESTful APIs, Problem Solving, OOP, Database Design & Optimization, SDLC

EDUCATION

B. Tech, Computer Science and Engineering

2021 – 2025

Siddhartha Institute of Science and Technology, Puttur | CGPA: 7.21 / 10

INTERNSHIP EXPERIENCE

Full Stack Web Developer Intern | Rooman Technologies | Bangalore

Feb 2025 – May 2025

Elite Cart — E-Commerce Web Application

[Live Demo](#) | [GitHub Repo](#)

Tech Stack: HTML, CSS, JavaScript, Python, Flask, MySQL

- Developed responsive web modules for product browsing, cart, and checkout flows using Flask and MySQL.
- Designed and implemented REST API to handle concurrent user sessions and database-driven transaction processing.
- Improved application reliability by identifying and fixing bugs through systematic testing, reducing functional issues.
- Validated 100+ end-to-end transactions to ensure data consistency and stable system performance during testing.
- Delivered incremental updates in an agile environment, incorporating peer feedback to refine feature sets.

PROJECTS

DDoS Attack Detection System | Tech Stack: Python, Django, MySQL, REST APIs, XGBoost, Random Forest

- Developed a real-time data-driven web application using the UNSW-NB15 dataset to classify network traffic and detect DDoS attack patterns.
- Designed Django REST APIs to integrate trained XGBoost and Random Forest models into backend services for real-time traffic prediction.
- Validated prediction accuracy through comprehensive test scenarios to ensure model reliability under varied traffic conditions.
- Structured relational data flows in MySQL for reliable model input/output tracking and consistent API behaviour.
- Improved usability by exposing prediction outcomes in a clear, actionable format to speed up incident response.

CERTIFICATIONS

- Python Full Stack Development** — Udemy (Django, REST APIs, MySQL)
- SQL and Database Design** — Scaler Academy (Subqueries, Joins, Indexing, Normalization)

ACHIEVEMENTS

- Earned GitHub achievement badges: Pull Shark, YOLO, and GitHub Actions — reflecting active open-source contributions and CI/CD adoption.
- Implemented CI workflows with GitHub Actions to automate validation and accelerate code integration in personal projects.
- Actively contributed to projects using version control and collaborative development practices.
